

"The products and services we provide make our customers more competitive. That's what Red Bud does for us as well."

Greg Head, GM  
McNeilus Steel, Inc.

McNeilus'  
4<sup>th</sup> Red Bud  
Stretcher

Our sheet and plate customers are competitive if their steel is "table top" flat and stays that way after processing. We once thought that meant a temper mill, but the Stretcher Leveler is a far better value. Today, we operate four Red Bud Stretcher Leveler CTL Lines at three facilities. We can supply a customer from any one of these facilities knowing they will get the same consistent, high quality product from those lines; just as Red Bud delivers the same consistent, high quality technology and support to us, day-in and day-out, year-after-year.

## CTL PLATE

McNeilus Steel processes hot roll up to 1/2", but Red Bud makes CTL Lines for coiled plate up to 0.750" x 96".

Red Bud CTL Plate Lines lead the pack in throughput. Why? Industry-leading automation: coil load/thread, the patented Grip Feed System, and stacking and bundle conveyor designs.

## LEVELING

Red Bud brought innovative Stretcher Leveling technology to the industry and has almost 40 installations worldwide.

Stretcher Leveling beats roller leveling and even temper pass for "stay flat" steel with no "art" or guesswork involved. Our patented SureGrip® clamping assures there's never slippage.

The SUREGRIP trademark is registered with the US Patent and Trademark office.
