

Heavy Gage Cut-To-Length by Red Bud Industries®

When PVS Metals, a division of Owen Industries, decided to build the industry's most advanced coil processing and fabrication center, they chose Red Bud technology.

That center now operates one of the world's largest Stretcher Leveler Cut-To-Length Lines. It processes master coils up to 1 inch thick, producing sheets up to 64 feet in length. Those sheets are perfectly flat, and the parts cut from them on the center's fiber lasers remain perfectly flat ... just how PVS Metals' customers want them.

Financing Available

CTL PLATE

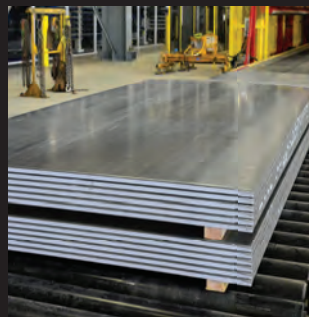

Coiled plate and high strength steel are tough on equipment and productivity. Our systems are "mill grade" and stand up to the challenge.

Red Bud CTL Plate Lines have "brains" to match their brawn: industry-leading automation, monitoring and diagnostics, plus top-rated service and support.

LEVELING

When you must have "stay flat" steel, Stretcher Leveling beats temper pass every time. Red Bud Stretcher Levelers more than stand the "test of time".

We have 5 times as many units installed as the top competitor. Our cycle times - coils run per shift - are 2 to 3 times higher. Installation time can be as little as 1 week.
