

"Red Bud's performance and reliability have been key to our growth. That goes for their equipment and their service."

Scott Schultz, Phoenix Metals

I spec'd, bought and installed this Red Bud Multi-Blanking Line 15 years ago. The product coming off was of such quality and accuracy, it helped us win customers. Since then, we've added 7 more Red Bud Lines.

At Phoenix Metals, we are committed to fast turnaround of orders and we've built an infrastructure that allows us to do it. Our Red Bud Lines are dependable and they change over fast – they are key to our ability to respond. Just as important is Red Bud's support. Many suppliers claim '24/7' support. Red Bud actually delivers it.

BLANKING

The leader in high production blanking – over 500 systems – Red Bud leads in real world blank tolerance: $\pm 0.005"$.

Fast changeover plus hands-free threading keeps surface sensitive material clean. The Automated CNC Slitting Head makes multi-blanking set up fast and foolproof.

CTL PLATE

Phoenix Metals runs stainless plate up to 3/8", but Red Bud makes CTL Lines for coiled plate up to 0.750" x 96".

Red Bud CTL Plate Lines lead the pack in throughput. Why? Industry-leading automation: coil load/thread, the patented Grip Feed System, and stacking and bundle conveyor designs.
