

"The service and reliability of Red Bud's steel processing lines are a known commodity for us."

Brian Hickey | President | Lapham-Hickey Steel

Red Bud

Next Generation Technology

**COMPLETE
COIL PROCESSING
SOLUTIONS**

Lapham-Hickey Steel is a fourth generation, family-run steel service center with a history dating back to 1926. Currently, they have 10 locations throughout the Midwest, Southeast, and Northeast. Processing coil, sheet, plate, long products, and fabrications, Lapham-Hickey serves every metal consuming industry.

Over 30 years of history with Red Bud Industries gave Lapham-Hickey ease of mind in purchasing their new 60" Red Bud Slitting Line. Lapham-Hickey was looking for features that included safety, efficiency, and automation.

"The Red Bud Slitting Line helps ensure our employees go home the same way they came in. From front to back of the line, there are automated features in place so that we don't have to handle the steel. The capabilities of this line allow us to handle the full range of steel from .008" up to .250" narrow slit coils and high strength steel."
