

“Customers choose us because our product is predictable, reliable, and repeatable. Same reasons we choose Red Bud.”

*Mark Ratner, President
Ratner Steel Supply*

We sell high quality cut sheet and plate our customers count on to stay flat after lasering, forming, or whatever they do with it. Red Bud has the best technology for that, but execution really sets them apart. We operate two Red Bud Stretcher Leveler CTL Lines at our original facility, and decided to build a greenfield service center based around this advanced .500" Stretcher Leveler CTL Plate Line. We opened June 1 and cut coil that same day. By June 30, we were running 12 hours a day, 7 days a week, thanks to predictable, reliable, repeatable Red Bud support.

CTL PLATE

Ratner Steel runs hot roll plate up to 1/2", but Red Bud makes CTL Lines for coiled plate up to .750" x 96".

Red Bud CTL Plate Lines lead the pack in throughput. Why? Industry-leading automation: coil load/thread, the patented Grip Feed System, and stacking and bundle conveyor designs.

LEVELING

Red Bud brought innovative Stretcher Leveling technology to the industry and has over 35 installations worldwide.

Stretcher Leveling beats roller leveling and even temper pass for stay flat steel with no 'art' or guesswork involved. Our SUREGRIP® clamping assures there's never slippage.

The SUREGRIP trademark is registered with the US Patent and Trademark office.
