

“The Results Are Quite Impressive”

Frank C. Pfirman, President
Matandy Steel & Metal Products, Hamilton, OH

“I have to admit when we looked at Red Bud’s Line, we were skeptical at first. However after comparing what we got with their line, we realized we would get more ‘bang for the buck’. RBI’s personnel also gave us a very good feeling.

Now that the new line is up and running, I have to say we are extremely pleased with every aspect of the startup process. We are sure we made the right choice and highly recommend Red Bud to anyone looking to purchase a new line. The system produces a superior product and our operators learned to run the line quickly. In addition to running prime material, the line has also proven its ability to significantly improve secondary material with its Multi-Strand Leveling System. Not only are we satisfied with the results, we are quite impressed.”
